MEMO TO FILE:

In Re: Shootering Canyon Uranium
Mines & Mill

Telephone conversation of
May 11, 1976 with Duane Frandsen

I talked this morning with Duane Frandsen, Attorney for Hydro Jet Service, the operator of this venture.

Mr. Frandsen had questions relative to the reclamation plan for this group of mines and mill. He was informed that more detail was needed for the leach pond and tailings pond locations. That is, a larger scale map of these areas should be supplied in the reclamation plan along with the basic objectives of the plan.

The objective of reclamation will generally be a physical stabilization of the mine dumps and tailings pond. The means of achieving stabilization, i.e., one foot of soil with mulch and seeding will be prescribed using today's technology. Naturally, by the time actual reclamation takes place the recommended procedures may change. An amended notice would change at that time.

Prescriptions for tailings covering, regrading, and for the establishment of vegetation for stabilization will be supplied to Mr. Frandsen when he reaches a draft of the reclamation plan.

Determination of pH of the soils to be vegetated will be performed by the Division.
